

È questo un possibile antidoto per il vaccino COVID??

Publicato 3 anni fa SU Maggio 13, 2021
Di Makia Freeman

A PRIMA VISTA...

- **LA STORIA:** Con tutti gli effetti orrendi causati dai vaccini COVID, esiste un possibile antidoto vaccinale COVID?
- **LE IMPLICAZIONI:** Essere a conoscenza delle erbe naturali, delle piante o di altre sostanze che possono ridurre o eliminare la coagulazione del sangue e la replicazione dell'RNA è una conoscenza potente.

Esiste un possibile antidoto per il vaccino COVID

che potrebbe proteggere coloro a cui è stata iniettata la miscela spacciandosi per a **COVID vaccine?** La dottoressa

Judy Mikovits

la pensa di sì. Mikovits, che è apparso in *Plandemic* film, ne ha recentemente rivelato il nome (che potete sentire in questo video excerpt): suramina. Le inquietanti storie dell'orrore dei vaxxati dal COVID sembrano non finire mai. In primo luogo, ci sono tutti i numerosi effetti avversi di coloro che hanno assunto il COVID non-vaccine tra cui emicrania, lividi, mestruazioni abbondanti e irregolari, aborti

Is this a possible COVID vaccine antidote? The drug suramin is derived from pine needles, which can be ingested as tea, to inhibit blood coagulation and RNA replication.

spontanei, potenziale sterilità e coagulazione del sangue potenzialmente letale. (Puoi leggere ciò che le persone autodenunciano qui [Reddit group](#) – allarmante). Poi c'è il bizzarro fenomeno dell' COVID vaxxed transmitting these effects to the unvaccinated semplicemente stando intorno a loro. A ciò si aggiunge il fenomeno dell magnets sticking to the COVID vaxxed nel sito di iniezione. Lo scopo del non-vaccino COVID è programmare il tuo RNA per produrre proteine spike in modo che il tuo corpo produca anticorpi contro di loro, anticorpi che presumibilmente ti proteggeranno dalla SARS-CoV-2. Sebbene ci siano molti problemi con questa teoria, incluso il fatto there is no real SARS-CoV-2 e quello spike proteins rest on the unfounded assumption di un virus isolato e purificato – c'è anche il netto pericolo che queste proteine spike indotte artificialmente possano causare danni. Questo è dove è possibile **COVID vaccine antidote** entra.

Possible COVID Vaccine Antidote: Suramin

Suramin is a drug which has been used as medicine for conditions such as African sleeping sickness and river blindness. It has been know to the medical profession for 100 years. Recently a small randomized clinical trial conducted the University of California San Diego found that a single intravenous dose of suramin produced dramatic improvement of core symptoms of autism, aka autism spectrum disorder (ASD). So what is suramin exactly? It turns out that it's yet another pharmaceutical drug which is an extract of a natural substance, in this case pine needles. This follow the Big Pharma business model of **bio-piracy** – find natural plants and substances, isolate a chemical from them, get a patent on it and sell it, while using scientific journals and the media to trash anyone who claims the original plant has medicinal value.

The article *Possible Antidote for the V-Serum and the Current Spike Protein Contagion* does a good job of going down the rabbit hole to reveal what suramin does and where it comes from:

“Here is the trail of science and data that shows the derivative relationship between pine needles and Suramin (“the elist’s antidote” to microbial illnesses) – and which also provides a potential antidote for those affected by the spike protein contagion ... Suramin further decreases the activities of a large number of enzymes involved in DNA and RNA synthesis and modification: DNA polymerases (103, 104), RNA polymerases (103, 105, 106), reverse transcriptase (18, 103), telomerase (67), and enzymes involved in winding/ unwinding of DNA (107, 108) are inhibited by suramin, as well as histone- and chromatin-modifying enzymes like chromobox proteins (109), methyltransferases (110), and sirtuin histone deacetylases (111). This is medical-speak for inhibiting the inappropriate replication and modification of RNA and DNA ... Suramin also showed inhibitory effects against components of the coagulation cascade (71, 130) ... Excessive coagulation causes blood clots, mini-clots, strokes, and unusually heavy menstrual cycles.”

Extremely interesting! It reveals that suramin inhibits **blood coagulation** or **blood clots** (a major theme throughout the entire **COVID op**) – the very issue that caused officials to be wary of the AstraZeneca and Johnson & Johnson COVID vaccines, causing many European nations to ban them, and also causing the US CDC at one point to halt them. Blood coagulation is also a theme of COVID itself, even before the advent of vaccines. What is also very fascinating is that suramin has the reported ability to decrease the activities of enzymes involved in DNA and RNA synthesis. This is exactly what the other 2 COVID vaccines – those made by Moderna and Pfizer – are trying to promote.

So, in plain English, this stuff could potentially slow or stop all the horrible blood clots people are suffering, plus potentially block the inappropriate RNA and DNA replication that the mRNA devices are trying to engender.

Suramin is Derived from Pine Needles

So where does suramin come from? Pine needles. It is one of many phytochemicals or plant chemicals that comes from pine needles, as the above article summarizes:

“Suramin is Derived from Trypan Blue

https://en.wikipedia.org/wiki/Trypan_blue

Trypan blue is derived from toluidine, that is, any of several isomeric bases, $C_{14}H_{16}N_2$, derived from toluene. Trypan blue is so-called because it can kill trypanosomes, the parasites that cause sleeping sickness. An analog of trypan blue, suramin, is used pharmacologically against trypanosomiasis. Trypan blue is also known as diamine blue and Niagara blue... Trypan red and trypan blue were first synthesized by the German scientist Paul Ehrlich in 1904.

Trypan Blue is a derivative of toluene which is a derivative of pine oil.

<https://en.wikipedia.org/wiki/Toluene>

The compound was first isolated in 1837 through a distillation of pine oil by the Polish chemist Filip Walter, who named it rétinnaphte.”

Why Take Suramin when You Could Make and Take Pine Needle Tea?

Why take a synthetic and isolated version when you could take the full-spectrum natural substance?

“Pine needle tea provides a similar, if not superior, benefit, due in part to the fact that it is a direct mild extract of the whole herb leaving many of its properties still intact that might be destroyed by excessive heat during distillation and further dissection of its many nutrient components ... Pine needles are high in vitamin C and A among numerous other compounds which provide a long list of benefits:

A 2011 Korean study demonstrated using pine needles in tea was the best way to access the antioxidant benefits from pine needles. The study demonstrated that the hot water extract of pine needle proanthocyanidins and catechins offer the highest levels of antioxidant benefits compared with chemical extract processes. There are other known benefits that pine needle tea and the tea made from other conifers share, which include:

- *Analgesic*
- *Antibacterial*
- *Antifungal*
- *Anti-inflammatory*
- *Antimicrobial*
- *Antioxidant*
- *Antiseptic*
- *Antitumor*
- *Antitussive*
- *Antiviral*
- *Aromatic*
- *Astringent*
- *Decongestant*
- *Detoxifying*

- *Disinfectant*
 - *Diuretic*
 - *Expectorant*
- *Immuno-modulating*
- *Improves circulation*
 - *Invigorating*
 - *Lymphatic*
 - *Relaxing*
- *Relieves nervous exhaustion and fatigue*
 - *Relieves sore muscles*
 - *Restorative*
 - *Tonic*

Herbalists the world over have known all along about the benefits of this simple natural tea. Pine needle tea has been used medicinally worldwide for thousands of years.”

Final Thoughts

As always, do your own research. I am not claiming suramin and/or pine needle tea is **the** COVID vaccine antidote, but rather a possible COVID vaccine antidote. More research needs to be done. If you are going to make your own, make sure you research what you're doing – be careful with the yew pine (which is not a true pine and can be toxic, although it does have some medicinal properties). The cypress is not to be used as an essential oil in high doses, but normally safe otherwise. Overall, however, pine needle tea has amazing health benefits. Being aware of natural substances which can block **DNA and RNA replication** may be very important knowledge in the years to come as we face an increasing virulent **nanotech invasion** carried out under the rubric of Operation Coronavirus.
