Author’s Note and Update

The World has been in a state of crisis for more than three years despite the fact that the WHO and the CDC (with the usual innuendos) have unequivocally confirmed that the RT-PCR test used to justify every single policy mandate including lockdowns, social distancing, the mask, confinement of the labor force, closure of economic activity, etc. is flawed and invalid.

The same applies to the roll-out of the mRNA Vaccine in December 2020.

This article was first published on March 21, 2021 focussing on the WHO’s Mea Culpa dated January 20, 2021.

The WHO advisory was then followed a few months later by the bombshell decision of [the Centers for Disease Control and Prevention \(CDC\)](#) (July 21, 2021) to withdraw the PCR test as a valid method for detecting and identifying SARS-CoV-2.

As of December, 31 2021, the PCR test is longer considered valid by the CDC in the U.S.

For more details see

[Bombshell: CDC No Longer Recognizes the PCR Test As a Valid Method for Detecting “Confirmed Covid-19 Cases”?](#)

By [Prof Michel Chossudovsky](#), December 29, 2021

What this implies is that both the CDC and the WHO have formally acknowledged the failures of the RT-PCR test, without however implementing a shift in the methodology of detecting and identifying SARS-CoV-2.

The Mainstream Media Now Reluctantly Acknowledges that the PCR Test is Flawed

After having sustained the propaganda campaign, the mainstream media has now tacitly acknowledged that the PCR TEST IS INVALID.

Below is an excerpt from [London's Daily Mail](#) on something which has been known and documented by scientists and the independent media from the outset of the corona crisis in January 2020.

The report below is convoluted. It is an obvious understatement:

“Did flawed PCR tests convince us Covid was worse than it really was? ...

It has been one of the most enduring Covid conspiracy theories: that the ‘gold standard’ PCR tests used to diagnose the virus were picking up people who weren’t actually infected.

Some even suggested the swabs, which have been carried out more than 200 million times in the UK alone, may mistake common colds and flu for corona.

If either, or both, were true, it would mean many of these cases should never have been counted in the daily tally - that the ominous and all-too-familiar figure, which was used to inform decisions on lockdowns and other pandemic measures, was an over-count. ([Daily Mail](#), March 12, 2022, emphasis added)

It is carefully worded with a view to protecting the decision-makers.

The PCR Test is the Smoking Gun. There is No Pandemic

We are not dealing with mistakes as suggested by the above media report.

If the PCR test is invalid and meaningless, this means that there is no such thing as a “Covid-19 Confirmed Case”

The results of the PCR test routinely tabulated by the WHO have been used to justify the lockdown policies imposed on more than 190 member states of the United Nations.

Economic and social chaos has been triggered Worldwide, and these actions adopted by corrupt governments in the course of the last three years are of criminal nature. They are not mistakes.

And if there is no Pandemic, there is no need for a vaccine.

The Covid-19 mRNA “Vaccine” is the BIGGEST FRAUD IN MEDICAL HISTORY

For further details see my E-Book (15 Chapters) entitled:

[The Worldwide Corona Crisis: Global Coup d'État against Humanity](#)

By [Prof Michel Chossudovsky](#), August 2022

[Michel Chossudovsky](#), Global Research, December 9, 2023

The WHO Confirms that the Covid-19 PCR Test is Flawed:
Estimates of “Positive Cases” are Meaningless.
Both the Lockdown and the “Vaccine” Have No Scientific Basis
by
Michel Chossudovsky
March 21, 2021

Nobel Prize Laureate Kary B. Mullis was the inventor of the polymerase chain reaction technique, which is analyzed in this article.

Dr. Kary B. Mullis, who passed away on August 7, 2019 at age 74, stated emphatically that [no infection or illness can be accurately diagnosed with the RT-PCR](#). His legacy will live.

“PCR is a Process. It does not tell you that you are sick. ... The measurement is not accurate”.

Mullis described the RT-PCR as a “technique” rather than “a test”.

It is a useful technique which allows for “rapid amplification of a small stretch of DNA”.

Introduction

There is a sequence of outright lies and fabrications used to justify far-reaching policy decisions in the course of the last 20 months.

The biggest lie, which is firmly acknowledged both by scientific opinion and the WHO is that the RT-PCR test used to “detect” the spread of the virus (as well as the variants) is not only flawed but TOTALLY INVALID.

From the outset in January 2020, all far-reaching policy decisions upheld and presented to the public as a “means to saving lives” were based on flawed and invalid RT-PCR case positives.

These invalid Covid-19 “estimates” have been used to justify confinement, social distancing, the face mask, the prohibition of social gatherings, cultural and sports events, the closure of economic activity, as well as the mRNA “vaccine” launched in November 2020.

The RT-PCR Test

The Real Time Reverse Transcription Polymerase Chain Reaction (rRT-PCR) test was adopted by the WHO on January 23, 2020 as a means to detecting the SARS-COV-2 virus, following the recommendations of a Virology research group (based at Charité University Hospital, Berlin), supported by the [Bill and Melinda Gates Foundation](#). (For Further details see the [Drosten Study](#))

Exactly one year later on January 20th, 2021, the WHO retracts. They don't say "We Made a Mistake". The retraction is carefully formulated. (See [original WHO document here](#) as well as in Annex)

While the WHO does not deny the validity of their misleading January 2020 guidelines, they nonetheless recommend "Re-testing" (which everybody knows is an impossibility).

The contentious issue pertains to the number of amplification threshold cycles (Ct). According to Pieter Borger, et al

The number of amplification cycles [should be] less than 35; preferably 25-30 cycles. In case of virus detection, >35 cycles only detects signals which do not correlate with infectious virus as determined by isolation in cell culture...([Critique of Drosten Study](#))

The World Health Organization (WHO) tacitly admits one year later that ALL PCR tests conducted at a 35 cycle amplification threshold (Ct) or higher are INVALID. But that is what they recommended in January 2020, in consultation with the virology team at Charité Hospital in Berlin.

If the test is conducted at a 35 Ct threshold or above (which was recommended by the WHO), genetic segments of the SARS-CoV-2 virus cannot be detected, which means that ALL the so-called confirmed "positive cases" tabulated in the course of the last 18 months are invalid.

According to [Pieter Borger, Bobby Rajesh Malhotra, Michael Yeadon, et al.](#), the Ct > 35 has been the norm "in most laboratories in Europe & the US".

The WHO's Mea Culpa

Below is the WHO's carefully formulated "Retraction". The full text with link to the original document is in annex:

WHO guidance [Diagnostic testing for SARS-CoV-2](#) states that careful interpretation of weak positive results is needed (1). The cycle threshold (Ct) needed to detect virus is inversely proportional to the patient's viral load. Where test results do not correspond with the clinical presentation, a new specimen should be taken and retested using the same or different NAT technology. (emphasis added)

WHO reminds IVD users that disease prevalence alters the predictive value of test results; as disease prevalence decreases, the risk of false positive increases (2). This means that the probability that a person who has a positive result (SARS-CoV-2 detected) is truly infected with SARS-CoV-2 decreases as prevalence decreases, irrespective of the claimed specificity.

"Invalid Positives" is the Underlying Concept

This is not an issue of "Weak Positives" and "Risk of False Positive Increases". What is at stake is a "Flawed Methodology" which leads to invalid estimates.

What this admission of the WHO confirms is that the estimate of covid positive from a PCR test (with an amplification threshold of 35 cycles or higher) is invalid. In which case, the WHO recommends retesting: "a new specimen should be taken and retested..."

The WHO calls for “Retesting”, which is tantamount to “We Screwed Up”.

That recommendation is pro-forma. It won't happen. Millions of people Worldwide have already been tested, starting in early February 2020. Nonetheless, we must conclude that unless retested, those estimates (according to the WHO) are invalid.

I should mention that there are several other related flaws regarding the PCR test which are not addressed in this article. (See Michel Chossudovsky's [E-book](#): click to download [The Worldwide Corona Crisis: Global Coup d'État against Humanity](#) (Chapter III))

From the outset, the PCR test has routinely been applied at a Ct amplification threshold of 35 or higher, following the January 2020 recommendations of the WHO. What this means is that the PCR methodology as applied Worldwide has in the course of the last 12-14 months led to the compilation of faulty and misleading Covid statistics.

And these are the statistics which are used to measure the progression of the so-called “pandemic”. Above an amplification cycle of 35 or higher, the test will not detect fragments of the virus. Therefore, the official “covid numbers” are meaningless.

It follows that there is no scientific basis for confirming the existence of a pandemic.

Which in turn means that the lockdown / economic measures which have resulted in social panic, mass poverty and unemployment (allegedly to curtail the spread of the virus) have no justification whatsoever.

According to scientific opinion:

“if someone is tested by PCR as positive when a threshold of 35 cycles or higher is used (as is the case in most laboratories in Europe & the US), the probability that said person is actually infected is less than 3%, the probability that said result is a false positive is 97% ([Pieter Borger, Bobby Rajesh Malhotra, Michael Yeadon, Clare Craig, Kevin McKernan, et al, Critique of Drosten Study](#))

3. The number of amplification cycles (less than 35; preferably 25-30 cycles);

In case of virus detection, >35 cycles only detects signals which do not correlate with infectious virus as determined by isolation in cell culture [reviewed in 2]; if someone is tested by PCR as positive when a threshold of 35 cycles or higher is used (as is the case in most laboratories in Europe & the US), the probability that said person is actually infected is less than 3%, the probability that said result is a false positive is 97% [reviewed in 3]

As outlined above, “the probability that said result is a false positive is 97%”: It follows that using the >35 cycles detection will indelibly contribute to “hiking up” the number of “fake positives”.

At the time of writing (mid-March 2021), despite the WHO retraction, the PCR test is being used extensively to hike up the numbers with a view to sustaining the fear campaign, justifying the ongoing lockdown policies as well as the implementation of the Covid vaccine.

Ironically, the flawed numbers based on “invalid positives” are in turn being manipulated to ensure an upward trend in so-called “Confirmed Covid -19 Cases”.

Moreover, those PCR tests are not routinely accompanied by a medical diagnosis of the patients who are being tested.

And now, national health authorities have issued (fake) warnings of a “Third Wave” as part of their propaganda campaign in support of the Covid-19 Vaccine.

The WHO confirms that the Covid PCR test procedure as applied is invalid. There is absolutely no scientific basis for implementing the Covid Vaccine.

Both the WHO and the scientific assessment of Pieter Borger, et al (quoted above) confirm unequivocally that the tests adopted by governments to justify the lockdown and the destabilization of national economies are INVALID.

Invalid Data and the Numbers’ Game

It should be understood that these “invalid estimates” are the “numbers” quoted relentlessly 24/7 by the media in the course of the “First Wave” and “Second Wave”, which have been used to feed the fear campaign and “justify” ALL the policies put forth by the governments:

- lockdown,
- closure of economic activity,
- poverty and mass unemployment,
- bankruptcies
- social distancing,
- face mask,
- curfew,
- the vaccine.
- the health passport

Invalid Data. Think Twice Before Getting Vaccinated

And Now we have entered a so-called “Third Wave”. (But where’s the data??)

It’s a complex “Pack of Lies”.

It’s a crime against humanity.

Postscript

Since its release on March 21, 2021, quite unexpectedly tens of thousands of people have read this article.

My intent was essentially to Refute and Reveal the Big Lie (focussing on scientific and statistical concepts) without directly addressing the broader implications of the lockdown and closure of economic activity.

This diabolical project which emanates from the upper echelons of the financial establishment (including the World Economic Forum) is destroying people's lives Worldwide. It is creating mass unemployment, triggering famines in developing countries.

With some exceptions including Tanzania, most of the 193 member states of the United Nations have endorsed the WEF's "corona consensus".

The Truth is a peaceful yet powerful weapon.

Now is the time to confront those governments and demand a repeal of the lockdown policies which are triggering poverty and despair Worldwide.

The WHO's BIG LIE is refuted by the WHO.

The alleged pandemic is a scam. That is something which cannot be denied or refuted.

And that was the object of this article.

It's a complex scam based on "a pack of lies" with devastating consequences.

In the course of the last 14 months starting in early January 2020, I have analyzed almost on a daily basis the timeline and evolution of the Covid crisis. From the very outset in January 2020, people were led to believe and accept the existence of a rapidly progressing and dangerous epidemic.

We are at the crossroads of one of the most serious crises in World history. We are living history, yet our understanding of the sequence of events since January 2020 has been blurred.

Worldwide, people have been misled both by their governments and the media as to the causes and devastating consequences of the Covid-19 "pandemic".

The unspoken truth is that the novel coronavirus provides a pretext and a justification to powerful financial interests and corrupt politicians to precipitate the entire World into a spiral of mass unemployment, bankruptcy, extreme poverty and despair.

More than 7 billion people Worldwide are directly or indirectly affected by the corona crisis.

WHO Information Notice for IVD Users 2020/05

Nucleic acid testing (NAT) technologies that use polymerase chain reaction (PCR) for detection of SARS-CoV-2

20 January 2021 | Medical product alert | Geneva | Reading time: 1 min (370 words)

Product type: Nucleic acid testing (NAT) technologies that use polymerase chain reaction (PCR) for detection of SARS-CoV-2

Date: 13 January 2021

WHO-identifier: 2020/5, version 2

Target audience: laboratory professionals and users of IVDs.

Nucleic Acid Testing (NAT) Technologies that Use Polymerase Chain Reaction (PCR) for Detection of SARS-CoV-2

Product type: Nucleic acid testing (NAT) technologies that use polymerase chain reaction (PCR) for detection of SARS-CoV-2

Date: 13 January 2021

WHO-identifier: 2020/5, version 2

Target audience: laboratory professionals and users of IVDs.

Purpose of this notice: clarify information previously provided by WHO. This notice supersedes WHO Information Notice for In Vitro Diagnostic Medical Device (IVD) Users 2020/05 version 1, issued 14 December 2020.

Description of the problem: WHO requests users to follow the instructions for use (IFU) when interpreting results for specimens tested using PCR methodology.

Users of IVDs must read and follow the IFU carefully to determine if manual adjustment of the PCR positivity threshold is recommended by the manufacturer.

WHO guidance [Diagnostic testing for SARS-CoV-2](#) states that careful interpretation of weak positive results is needed (1). The cycle threshold (Ct) needed to detect virus is inversely proportional to the patient's viral load. Where test results do not correspond with the clinical presentation, a new specimen should be taken and retested using the same or different NAT technology.

WHO reminds IVD users that disease prevalence alters the predictive value of test results;

as disease prevalence decreases, the risk of false positive increases (2). This means that the probability that a person who has a positive result (SARS-CoV-2 detected) is truly infected with SARS-CoV-2 decreases as prevalence decreases, irrespective of the claimed specificity.

Most PCR assays are indicated as an aid for diagnosis, therefore, health care providers must consider any result in combination with timing of sampling, specimen type, assay specifics, clinical observations, patient history, confirmed status of any contacts, and epidemiological information.

Actions to be taken by IVD users:

1. Please read carefully the IFU in its entirety.
2. Contact your local representative if there is any aspect of the IFU that is unclear to you.
3. Check the IFU for each incoming consignment to detect any changes to the IFU.
4. Provide the Ct value in the report to the requesting health care provider.
